alr_2026_0314_khad - Flagged because the suspended-sediment indicator is 2.4x its seasonal baseline across the 3.07 km2 North-eastern zone, with a correlated rise in turbidity.
alr_2026_0314_khad - Flagged because the suspended-sediment indicator is 2.1x its seasonal baseline across the 2.89 km2 Eastern zone, with no corroborating indicator.
alr_2026_0314_khad - Flagged because the suspended-sediment indicator is 2.0x its seasonal baseline across 0.32 km2 of South-western zone 2, with a distinct patch visible in the imagery.
alr_2026_0314_khad - Flagged because the suspended-sediment indicator is 1.8x its seasonal baseline across the 2.12 km2 South-western zone, with no corroborating indicator.
alr_2026_0428_khad - Flagged because the suspended-sediment indicator is 1.5x its seasonal baseline across 0.15 km2 of South-western zone 2, with a distinct patch visible in the imagery.
alr_2026_0607_khad - Flagged because the suspended-sediment indicator is 1.5x its seasonal baseline across the 2.89 km2 Eastern zone, with an unusual combination of indicators for this zone. Rainfall in the preceding 72 h was 8 mm.

Satellite-observed anomaly. Ground and laboratory testing recommended for validation. Indicator values are satellite-derived proxies; z-scores compare each zone with its own seasonal baseline. Generated 2026-09-26 19:19 UTC.

Tuesday 15 September 2026

scene **S2B_43QCA_20260915_0_L2A** - sentinel-2b via earth-search - tile cloud 44 % - valid over body 64 % - water extent **5.57 km2** (56 % of AOI) - rain 24 h 0.8 mm / 72 h 7.0 mm

0 of 4 zones flagged by a detector; 0 alertable; highest priority 5/100.

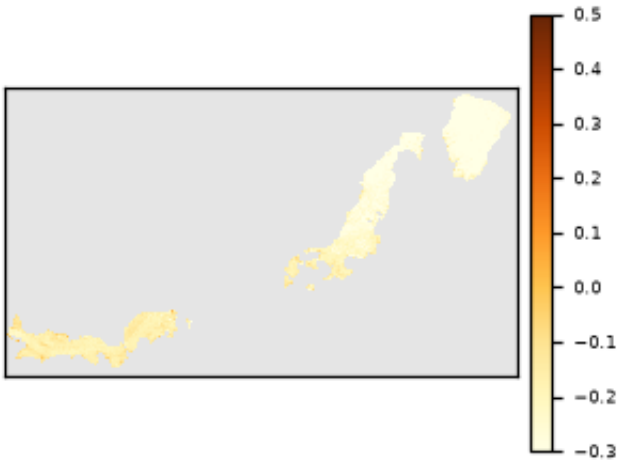

Sentinel-2 false colour NIR/R/G (cached bands)

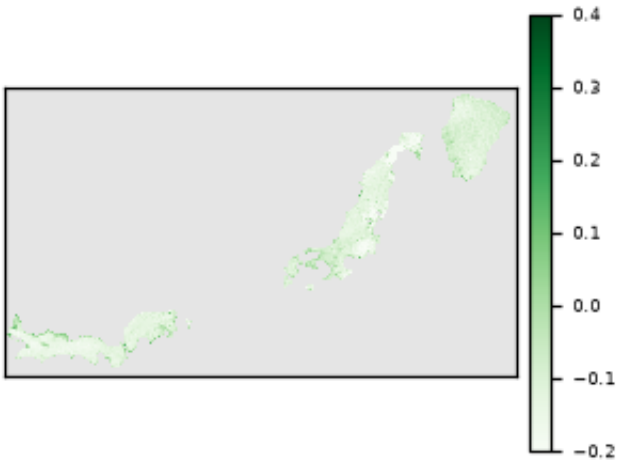

Detected water

Turbidity (NDTI)

Chlorophyll-a (NDCI)

Per-zone data
